Tableau Actions:

- Tableau actions are interactive elements that allow users to interact with dashboards by filtering, highlighting, or navigating between worksheets and URLs.

Types of Actions:

- **Filter Action**: Filters data in other worksheets based on user selection in the source sheet.

- **Highlight Action**: Highlights common dimensions in multiple charts.

- **Go to URL Action**: Opens a specified URL when selecting elements in a source sheet.

- **Go to Sheet Action**: Navigates between dashboards or worksheets.

- **Change Parameter Action**: Changes the value of a parameter based on user selection.

- **Change Set Values Action**: Changes set values based on user interaction.

Filter Action:

- Filters data in target sheets based on selections in source sheets.

- Options: Source Sheets, Target Sheets, Run Action on (hover, select, or tooltip), and action on clearing selection.

Highlight Action:

- Highlights common dimensions in source and target sheets.

- Options: Source Sheets, Target Sheets, Run Action on, and Target Highlighting.

Go to URL Action:

- Opens a URL when a chart element is clicked.

- Options: Source Sheets, URL Target (browser or within dashboard), Run Action on, and dynamic URL using dimension names.

Go to Sheet Action:

- Navigates from one sheet to another within a dashboard.

- Options: Source Sheets, Target Sheets, and Run Action on.

Change Parameter Action:

- Changes the value of a parameter based on user selection.

- Options: Source Sheets, Target Parameter, Source Field, Aggregation, and behavior on selection clearing.

Change Set Values Action:

- Changes set values based on user selection.

- Options: Source Sheets, Target Set, and behavior on selection clearing.

Saving Work:

- **Tableau Professional**: Save work to Tableau Server or Tableau Public.

- **Tableau Public**: Save work to Tableau Public via File >> Save to Tableau Public.
